

Partials/Dentures

Post-Operative Care

- In some instances, we will need to make minor adjustments to the partial/denture following your delivery
- DO NOT adjust your partial/denture yourself
- Remove your partial/denture at night
- When not wearing, keep your partial/denture in water
- Brush your partial/denture every day in order to keep it clean
- Do not bite your partial into place, always use your fingers/thumbs and be easy on the clasps
