

Root Canal

Post-Operative Care

- You will want to be on your prescribed medications as directed for at least 4-5 days after treatment
- You may experience pressure, sensitivity, and moderate pain
- Gums may be tender and need extra care and attention
- With the temporary filling, do not bite down hard for 1 hour after treatment. To allow time for the material to completely set
- Chew on the opposite side until permanent restoration is completed
- Follow up with the placement of your permanent restoration 10-14 days after root canal treatment
- Delaying placement of permanent restoration may damage the tooth beyond repair resulting in loss of the tooth
