

Cosmetic *Dentistry*

Have you wished that your smile reflected the way you feel inside? That it was bright and warm and wide? We are here to help you find well-being and confidence with natural looking, long lasting cosmetic dentistry. In fact, we offer a free cosmetic consultation to anyone!

This branch of dentistry not only addresses the appearance of the smile, but also its health and balance. We could just as easily reverse that statement and say that cosmetic dentistry not only addresses the health and balance of your teeth, it also focuses on the aesthetic appeal of every treatment.

Our cosmetic services can treat a wide range of difficulties from the simplest whitening of stained and discolored teeth, to full mouth rejuvenation for broken-down and decayed teeth. The amazing advancements that have been made in cosmetic dentistry make it easier, more convenient and more comfortable to have the smile of your dreams. New technology makes it possible for us to complete even the most comprehensive procedures in two to three visits, correcting any problem and restoring any smile.

► Designing a Smile Just for You

Just like you, your smile is unique. We take great care in designing a smile that complements you. We take a series of facial measurements to help us create a smile that is in proportion to your bone structure, age and gender. We want your smile to enhance your appearance and look completely natural.

► Full-Mouth Restoration

Full-mouth restoration is the individual recreation of each tooth in a mouth. Full-mouth restoration is needed when the teeth are worn down, broken or missing, causing problems in both the bite and appearance of the mouth. Dr. Mudassar can totally rejuvenate your mouth, creating a healthy, beautiful smile in just two visits. This process is so successful that others cannot distinguish the real teeth from the restored teeth.

► Perfection with Porcelain Veneers

Porcelain veneers are thin sheets of ceramic that bond directly to the front surfaces of the teeth. They are an ideal choice for improving your smile and have become increas-

ingly popular due to their simplicity and versatility. When bonded to the teeth, the ultra-thin porcelain veneers are virtually undetectable and highly resistant to coffee, tea or other staining agents. For strength and appearance, their resemblance to healthy, white tooth enamel is unsurpassed by other restorative options.

► Tooth Contouring

Recontouring is an artful and conservative treatment. Using contouring we can quickly and painlessly improve your appearance and create a more harmonious smile by reshaping chipped or misaligned tooth edges.

► Gum Contouring to Frame Your Smile

The aesthetic framing of the gum tissue is as important to the teeth as a quality frame is to an artist's painting. Contouring is basically a simple gum lift but makes a tremendous difference in one's smile. The use of a laser and a topical anesthetic quickly reshapes the gum line, creating an even, more beautiful smile!

► Whitening Stained or Discolored Teeth

We now have the third generation of the Zoom whitening systems. This improved whitening system uses even more powerful and effective ultraviolet energy. This energy activates the special gel catalyzed by a photo-Fenton reaction of peroxide and dissolved iron. We have found that our Zoom® system is faster and easier, with superior whitening performance.

Let us show you how the revolutionary Zoom! Whitening system can brighten your smile up to ten shades in less than an hour so you can quickly get back to life with a brand-new glow!

Or if you prefer, you can lift the stains gradually with the Zoom!® at-home whitening process, using thin trays and a prescription-strength whitening gel.
