

Comprehensive Dentistry – *Hygiene and General Care*

Our team believes in providing truly personalized care, treating not only the symptom that may have brought you into our office but also, more importantly, the cause of the problem. We take time to talk with you and listen to you. We know that even minor oral health problems can affect your whole body.

That's why, instead of waiting for oral problems to affect your health, we choose to see the larger picture by restoring and then maintaining your optimal oral health.

Dr. Mudassar will provide you with a thorough and honest evaluation of your overall oral health, ensuring that you make an educated and informed decision about your care.

With such proactive care as advanced hygiene, and so many restorative options, oral health is more advanced and specialized than ever before.

► Oral Exams

Some dentists treat your symptoms. They may do an excellent job, but if your symptoms keep reoccurring, your trouble could be much more complex than what is showing up on the surface. We are specially trained to look further than surface symptoms and get to the cause of even the most baffling problem. We even check for the first signs of oral cancer.

We use the latest technology such as intra-oral cameras which allows the doctor to see what is happening in your mouth with much more detail and accuracy than x-rays alone.

► Cleanings, Hygiene and Periodontal Therapy

You may think of hygiene visits as just a regular cleaning and exam, but we see them as opportunities to stop periodontal problems in their tracks.

Healthy gums are the first step to complete oral health. Taking care of periodontal problems is how we begin dental treatment with our new patients.

The bacteria that causes periodontal disease also has been linked to serious health problems such as heart diseases, strokes, certain types of cancer, poor circulation and premature and low birth weight babies. When we treat periodontal disease, our concern is for your overall health, not just your teeth.

► Restorative Procedures

Sound, strong teeth – they keep your jaw balanced, let you enjoy all kinds of food and are the gleam in your smile. It's what nature intended. But life can take its toll on your teeth and they can become cracked, worn-down or decayed. That's when our advanced restorative procedures come into play. We offer all kinds of restorations, from fillings and bonding to crowns, bridges and dentures to keep your mouth healthy, whole and, best of all, beautiful.

► Pediatric Care

Children have charming smiles. Sweet and bright...and trusting. Don't put the care of those precious smiles into the hands of just any dentist. Dr. Mudassar is experienced and has a careful, caring approach that will put both you and your child at ease. He knows that the right oral health care starts early. That's why we offer pediatric treatments for the health and care of teeth, gums, and bite, to keep their natural strength and beauty. We use the most conservative, tooth preserving methods available. Your child's confident smile – we want to keep it that way.

"I was immediately impressed...The entire staff is willing to go beyond, especially with small children. They extend themselves to others in an attitude of love, selflessness, generosity and genuineness. In all the years I've been going to Dr. Mudassar, no matter how small or complicated the procedure, he has never been satisfied until the job was done to perfection." - Ramona
